Completed research

(updated Summer 2006)

This index of MI research is updated regularly. The list was compiled by searching Medline, Embase and Pharmline from 1980 to Summer 2006. The UKMI Annual Conference Proceedings were also searched by hand.

These papers are all concerned with research. Reviews and discussion papers have been omitted. The papers cited relate to a formal medicines information service for humans in the setting of a healthcare organisation. Research concerned solely with industry-based services is not included.

The citations are categorised under the headings below, which are the same ones used in the Research ideas section. Some papers may appear in more than one section.

If you are aware of any papers that we have missed please e-mail angela.emerson@suht.swest.nhs.uk
